

measure BAT+ in range 0-5V
ESP8266 ADC needs 0-1V

to I2C temperature / humidity / ... sensors
pinout matches AHT20+BMP280 module

ATTINY handles low-power sleep and rain gauge counting
wakes up the ESP after ~30 minutes (like sleep-mcu)
REED_SW is connected to INT0 / PCINT1 so it can wake up the MCU

C2 and R13 form a RC-Debounce circuit

to rain gauge reed switch

extra switch or analog sensor

TITLE: esp weather sensor + rain gauge		REV: 1.0
